

50 points. 75 minutes. Closed book/notes. Name: _____

1. For each of the following program fragments, determine the time complexity using the *Big O* notation. Explain your analysis next to each program fragment **[2*3 = 6 points]**

	Program Fragment	Time Complexity (Big O Notation)	Explanation
1	<pre>for (int i=0; i<n; i++){ for (int j=0; j<n*n; j++){ a = a + i + j; } }</pre>		
2	<pre>for (int i = 1; i < n; i *= 2) { a = a + i; }</pre>		
3	<pre>If (a==b){ for (int i=0; i<3*n; i++){ for (int j=0; j<2*n; j++){ a = a + i + j; } } } Else { int a=0,i=n; while(i>0){ a=a+i; i=i/2; } }</pre>		

2. What is the Time Complexity of the following algorithms? **[10 points]**

Sorting Algorithm	Best Case Time Complexity	Worst Case Time Complexity
a. Insertion Sort		
b. Heap Sort		
c. Merge Sort		
d. Quick Sort		
e. Quick Sort Median of Three		

3. Given an input sequence of character keys: **[123,96,145,250,17,33,21,124,121,130]** illustrate the creation of a **binary search tree** if these keys are inserted in the above order. **[5 points]** (You don't have to draw each steps, you can draw the final BST if you want)

Show what the tree would look like after the following changes are made to this tree in the following order (make sure to include all the intermediate steps and explain each step): **[6 points]**

- a. **Delete** node with value **33**
- b. **Delete** node with value **145**
- c. **Insert** node with value **129**

The algorithm for deleting a node in a binary search tree is given below:

TREE-DELETE(T, z)

```

if  $z.left == \text{NIL}$ 
    TRANSPLANT( $T, z, z.right$ )           //  $z$  has no left child
elseif  $z.right == \text{NIL}$ 
    TRANSPLANT( $T, z, z.left$ )           //  $z$  has just a left child
else //  $z$  has two children.
     $y = \text{TREE-MINIMUM}(z.right)$        //  $y$  is  $z$ 's successor
    if  $y.p \neq z$ 
        //  $y$  lies within  $z$ 's right subtree but is not the root of this subtree.
        TRANSPLANT( $T, y, y.right$ )
         $y.right = z.right$ 
         $y.right.p = y$ 
    // Replace  $z$  by  $y$ .
    TRANSPLANT( $T, z, y$ )
     $y.left = z.left$ 
     $y.left.p = y$ 

```

```

TRANSPLANT( $T, u, v$ )
if  $u.p == \text{NIL}$ 
     $T.root = v$ 
elseif  $u == u.p.left$ 
     $u.p.left = v$ 
else  $u.p.right = v$ 
if  $v \neq \text{NIL}$ 
     $v.p = u.p$ 

```

Exam-2

4. Given the following character keys: **[120, 38, 165, 190, 185, 200, 250]** show the steps involved in creating a **red-black tree**. Make sure to draw the tree after each key is inserted in the given sequence. **[10 points]**

The pseudo-code for red-black tree insert is given below.

<pre> RB-INSERT(<i>T</i>, <i>z</i>) <i>y</i> = <i>T.nil</i> <i>x</i> = <i>T.root</i> while <i>x</i> ≠ <i>T.nil</i> <i>y</i> = <i>x</i> if <i>z.key</i> < <i>x.key</i> <i>x</i> = <i>x.left</i> else <i>x</i> = <i>x.right</i> <i>z.p</i> = <i>y</i> if <i>y</i> == <i>T.nil</i> <i>T.root</i> = <i>z</i> elseif <i>z.key</i> < <i>y.key</i> <i>y.left</i> = <i>z</i> else <i>y.right</i> = <i>z</i> <i>z.left</i> = <i>T.nil</i> <i>z.right</i> = <i>T.nil</i> <i>z.color</i> = RED RB-INSERT-FIXUP(<i>T</i>, <i>z</i>) </pre>	<pre> LEFT-ROTATE(<i>T</i>, <i>x</i>) <i>y</i> = <i>x.right</i> // set <i>y</i> <i>x.right</i> = <i>y.left</i> // turn <i>y</i>'s left subtree into <i>x</i>'s right subtree if <i>y.left</i> ≠ <i>T.nil</i> <i>y.left.p</i> = <i>x</i> <i>y.p</i> = <i>x.p</i> // link <i>x</i>'s parent to <i>y</i> if <i>x.p</i> == <i>T.nil</i> <i>T.root</i> = <i>y</i> elseif <i>x</i> == <i>x.p.left</i> <i>x.p.left</i> = <i>y</i> else <i>x.p.right</i> = <i>y</i> <i>y.left</i> = <i>x</i> // put <i>x</i> on <i>y</i>'s left <i>x.p</i> = <i>y</i> </pre>
<pre> RB-INSERT-FIXUP(<i>T</i>, <i>z</i>) while <i>z.p.color</i> == RED if <i>z.p</i> == <i>z.p.p.left</i> <i>y</i> = <i>z.p.p.right</i> if <i>y.color</i> == RED <i>z.p.color</i> = BLACK // case 1 <i>y.color</i> = BLACK // case 1 <i>z.p.p.color</i> = RED // case 1 <i>z</i> = <i>z.p.p</i> // case 1 else if <i>z</i> == <i>z.p.right</i> <i>z</i> = <i>z.p</i> // case 2 LEFT-ROTATE(<i>T</i>, <i>z</i>) // case 2 <i>z.p.color</i> = BLACK // case 3 <i>z.p.p.color</i> = RED // case 3 RIGHT-ROTATE(<i>T</i>, <i>z.p.p</i>) // case 3 else (same as then clause with "right" and "left" exchanged) <i>T.root.color</i> = BLACK </pre>
